

Large-Scale Migrations with Codemods

$f(x)$

Frictionless

- ember-template-lint (**sort invocations**)
- eslint (sort class members, imports, TS interfaces)
- prettier (**format hbs tags**, <template> tags)
- stylelint (sort properties)
- package.json (sort properties)

github.com/ijlee2/frontend-configs

Uniform

- **Add missing tests**
- Inject services
- Rename components
- Rename design tokens
- **Rename test modules**

github.com/ijlee2/codemod-utils

Modern

- Find old helpers
- Remove Sass
- **Add component signatures**
- Report TS coverage
- **Adopt <template> tags**

github.com/ijlee2/codemod-utils

ember-codemod-add-template-tags

Features

- Statically analyzes code (no need to build projects)
- Supports v1 apps (classic, Webpack), v2 apps (Vite)
- Supports v1 addons, v2 addons
- Supports monorepos (convert all packages at once)
- Light and fast
